Overview

Purpose:
- Learn from stakeholders (i.e., Intramural Research Program ("IRP") staff and Clinical Center ("CC") staff) how to enhance quality of care at the CC.
- Provide CC and IRP staff with an opportunity to be heard on concerns they have about the Clinical Center.

Progress:
- Number of Focus Group registrants to date = 677
- Number of Focus Group sessions to date = 57
- CC and IRP staff who have participated in Focus Group Sessions to date = >550
Overview (Continued)

Structure:
- Participation of one or two members of the Clinical Center Engagement Working Group at each session
- Notes taken, but specific concerns and recommendations not attributed
- Sessions last approximately 60 minutes.

Focus Group Session Statistics:
- 50 general sessions with CC and IRP staff
- Two sessions with CC Department Heads
- One session with the Office of NIH Legal Advisor
- Two sessions with the Nutrition Department
- One session with the Office of Research Facilities
- One session with CC Patient Advisory Group

Additional Specific Focus Group Sessions:
- Off-hour open sessions (one evening session and one weekend session)
- Sessions with the Housekeeping Department and CC suppliers

Primary Questions to Focus Groups

- What is great about the Clinical Center—what brought you here, what keeps you here?

- What tensions do you observe between patient care and clinical research?

- How, if at all, does the unusual (for a hospital) organizational structure of the Clinical Center affect patient care?
Probe Questions

• What, if any, concerns related to patient safety weigh on you?

• If you could change one thing about the Clinical Center to improve patient safety, what, if anything, would you change?

Emerging Themes

• Clinical Center is a fragmented enterprise, not one hospital, but 17.

• Clinical Center Director and staff control only a portion of what occurs at the hospital—Institutes have more responsibility for clinical care than CC director and staff.

• Holding CC and IRP staff accountable is made very difficult by fragmented structure.

• There is insufficient consistency in patient care practices and procedures at the Clinical Center.

• Communications lapses are commonplace and impact patient care.

• Clinical Center is not a full-service hospital—standard of care excursions occur when capabilities are needed that are not resident at the CC.
Emerging Themes

- Insufficient transparency related to misadventures or unexpected events at CC.

- Insufficient resources, capabilities and expertise resident at Clinical Center for pediatric patients.

- No clear pattern for how Occurrence Reporting System (ORS) submissions are adjudicated and addressed.

- Improvements are necessary to present approach to resourcing protocols—insufficient attention is given to complications and outcomes that are adjacent to the protocol.

- Clinical Center facilities are maintained like others buildings on the NIH campus and not specifically as a hospital—this may lead to patient safety/quality of care issues at the CC.

- Non-tenure track staff (e.g., staff clinicians) feel that they are not valued to the same degree as tenured or tenure track staff.

Interim Recommendations/Confidence Building

- Establish a risk management mechanism to develop and enforce CC-wide mandatory polices/procedures related to high-risk patients (e.g., pediatric patients)/protocols.

- Establish a clinical care standards and practices mechanism to review on a monthly basis deaths, misadventures and unusual occurrences at the CC.

- Institute Monthly Morbidity and Mortality Conferences (medical, surgical, etc.) for the CC, chaired by members of the MEC on a rotating basis.

- Establish a Mandatory ListServ including all CC and IRP staff with patient care responsibilities, broadly defined, to communicate important information from the CC Director/CEO.

- Recognize and tangibly reward staff clinicians, nurse practitioners and other non-tenured staff for excellence in clinical care.
Next Steps

- Facilitate final Focus Groups sessions (<10 sessions)

- Following final session, meet with the Clinical Center Engagement Working Group, chaired by Dr. Griffith, to draft Summary of Themes, Recommendations and Conclusions.

- Once the Working Group has adopted the Summary of Themes, Recommendations and Conclusions, submit same to Steering Committee chaired by Dr. Gottesman.
